Last week, the global satellite navigation community gathered at the ddb forum in Berlin to recognise the year's most brilliant innovations in commercial applications of satellite technology that took place in line with the 2nd Satellite Masters Conference. The project Poseidron won over the international jury of experts with its remote-controlled multicopter built to support maritime search-and-rescue services – and took home the grand prize ahead of the European Satellite Navigation Competition's 29 other winners. Should

We are very happy to let you know that we made the 3rd place in the Galicia Challenge and the 3rd place in the PRS prize with our idea "Firefighter Galileo" out of remarkable new all-time record of 515 submissions that we received from more than 40 different countries. It proves that our idea is worth to be honoured and we sincerely congratulate on this success! We have been provided with an official ESNC Label that indicates us as finalists of the European Satellite Navigation Competition 2015.
